The partnership with Harvard Business Publishing has had major milestones, undergoing major modernization efforts across projects, updating legacy code with the latest versions and technologies.

unosquare provides constant support, maintenance and development of new features and upgrades to all existing HBP projects, as we have presence in every Vertical Business Units and Horizontal Functional Units.

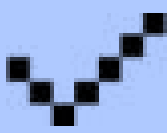

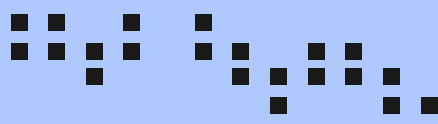

Our team is proud to have grown with Harvard, as we started with 2 developers and a single project in 2014. Today, our teams make up 40% of HBP Engineering Services, which total 64 professionals.

- Projects in HBP used to be self-hosted monoliths with self-managed infrastructure. Today, all available applications have been split into micro-frontend applications and REST microservices, with everything hosted in AWS.
- Our team worked with HBP on HBR Spark, a new digital learning product innovating in the business learning sector. The MVP was created from a blended team comprised of 50% unosquare personnel, using top tier cloud technologies (AWS Cloud) and modern frameworks such as Spring and Next JS. The product has been launched with 4 clients, with an expansion roadmap once the legacy version is discontinued. Unosquare continues working on the post – MVP releases.

Partnership Length

10 years and counting...

You Aren't Alone
